ABOUT ME

Hi, I am a frontend developer, and I create websites, web interfaces, web animations and adaptation of resources for different devices. When working on a project or task, I break the work into stages to constantly control the process and get the result in the most efficient way. In my work, I try to take into account the wishes of the team. I love interesting and challenging projects that push me to self-development.

TECH SKILLS

HTML5	Pug, Blade, Django Templates, BEM	PHP	Laravel, Filament
CSS3	Sass, SCSS, Tailwind CSS, shadcn/ui	Python	Django
JavaScript	ES6+, jQuery, Ajax	Node.js	Express
TypeScript		Databases	PostgreSQL, MySQL / MariaDB, MongoDB
Vue 3	Composition API, Router, Vuex, Inertia.js, SSR, VueUse	DevOps	Docker, Docker Compose
Testing	Pest, PHPUnit	AI / LLM	OpenAI API, MCP, agent orchestration
Tools	Git, Vite, Gulp, ESLint, Prettier	Languages	Ukrainian (native), Russian (native), English (B1)

EDUCATION AND EXPERIENCE

Feb 2022 – present	Freelance — front-end developer
Sep 2021 – Feb 2022	Internship at the company "Webcase" — junior front-end developer
Aug – Sep 2021	HTML/CSS + JS courses
2017 – 2021	Ukrainian Scientific Research Institute of Cable Industry — electrical test technician
2012 – 2017	Internet provider "Intelcom" — internet network installer
2011 – 2012	Azov Cable Company — database operator
2007 – 2011	Azov Regional Institute of Management — economic cybernetics

PROJECTS

COMMERCIAL

Renoptik CMS

renoptik.fsm.lv · private repository

Laravel, Inertia, Vue 3, TypeScript, Tailwind, PostgreSQL, Docker

E-commerce platform for a Swedish optics retailer. The storefront runs on Inertia and Vue 3 with server-side rendering for search visibility: catalog and product pages, a lens ordering flow, cart, favourites and customer profiles. The frontend is split into shop and admin domains that share typed composables for cart, search and translations, and the same codebase serves a custom admin panel for content, media and lens pricing.

TripBox

tripbox.ge · private repository

Django, Python, JavaScript, Sass, PostgreSQL, Docker

Car rental marketplace operating in Georgia. My work is concentrated on the frontend of the public site and the partner cabinet: fleet and booking screens, host onboarding, personal host websites, blog and SEO pages. Django templates are paired with Sass and vanilla JavaScript, backed by PostgreSQL, Redis job queues, an AI assistant, GPS tracking and a Telegram bot, deployed with Docker behind Nginx.

Marvli Wallet

stage.marvli.com · private repository

Laravel, Inertia, Vue 3, Tailwind, shadcn-vue, MariaDB, Docker

Multi-currency wallet cabinet for a fintech product. The client area is built on Inertia and Vue 3 with Tailwind and shadcn-vue components: accounts and balances, transfers, counterparties and beneficiaries, plus KYC verification and business questionnaires. Administration runs on a Filament back office with activity logging, and the application is served through Laravel Octane with Reverb for real-time updates.

TOOLS

Builder

github.com/ChubYury/templateGulp

JS, Gulp

My own Gulp starter for static sites, and the build this portfolio itself runs on. It compiles Pug and Sass, assembles SVG sprites, optimises images, generates web fonts from TTF, groups media queries and stamps assets with version numbers for cache busting.

LLM Lab

private repository

LLM agents, MCP, prompt engineering

A personal laboratory for researching and building LLM skills and agents. It holds a library of reusable skills and agent definitions, MCP integrations and a fixed experiment protocol — hypothesis, method, result, conclusions — along with orchestration setups written for the Marvli, Renoptik and TripBox projects.

PETS

Stationery shop

chubyury.github.io/stationery · github.com/ChubYury/stationery

HTML5, CSS3, Sass

A multi-page stationery store layout: twelve product pages, a catalog and a cart. Built from Pug templates with BEM naming and Sass, it was an exercise in keeping markup and styles consistent across many near-identical pages without duplicating code.

Coach app

vlp-umber.vercel.app · github.com/ChubYury/VLP · /vueServer

HTML5, CSS3, Vue, Express, MongoDB

An application for finding sports coaches and sending them requests. A Vue 3 single-page app with Vue Router for navigation and Vuex for state, talking to a small Express and MongoDB API: coach listings with filtering, registration as a coach, request forms and authentication.
